Art Unit: 2653

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The Title should provide a more detailed structural identification of the feature or features which distinguish the invention from the prior art. The intended results produced by the structural differences can also be part of the content of the Title.

2. Figures 1 and 2 should be designated by a legend such as -- Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g).

3. The abstract of the disclosure is objected to because it contains references numbers that are not contained in parenthesis. Correction is required. See MPEP § 608.01(b).

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more

Art Unit: 2653

than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

5. Claims 1-6 are rejected under 35 U.S.C. § 102(e) as being anticipated by Redon.

See Fig. 1. Note, to the extent claimed and understood, the structure as shown in Addendum A reads on and performs to the same degree as claimed. See col.5, lines 51-53 which indicate that the composition of these conductive gap layers may be made of an alloy of most of the listed materials in the claims such as Au and Ta.

6. For a complete response applicant should identify how the claimed structure of his invention defines over **all** the art of record.

Moreover, where the applicant disagrees with the reasoning and/or application of the prior art on critical points of the claims, they should identify how the claimed structure of their invention defines over **all** the art of record not just the applied art.

Art Unit: 2653

Where applicant believes that the art is redundant and/or superfluous relative to the critical aspects of the claimed invention the applicant may simply state so in rebuttal summary.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to A.J. HEINZ whose telephone number is (703)308-1544.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist of Group 2600 whose telephone number is (703)305-3900.
